

ISFAN FAJAR ANUGRAH, S.KOM

Backend Developer | Python · PHP Laravel · MySQL · Automation

Cilegon, Banten | +62 822-9818-0777 | isfanfajar@gmail.com | linkedin.com/in/isfan-fajar-anugrah | github.com/fajarisfan

PROFESSIONAL SUMMARY

Results-oriented Backend Developer with a strong foundation in designing scalable internal web applications, data pipelines, and automation systems. Expert in Python (Streamlit, scripting) and PHP (Laravel, CodeIgniter). Proven track record delivering production-ready applications that replace inefficient manual workflows. Applies clean code principles and agile problem-solving to transform complex business logic into high-performing backend services.

TECHNICAL PROJECTS

Jaspel Automation Converter (BPJS FPK Engine)

2025–2026

Lead Backend Developer & Systems Architect

Python · Streamlit · Pandas · Regex

- Architected a production-ready data pipeline that auto-extracts, cleans, and processes unstructured BPJS FPK data from large-scale medical PDFs.
- Implemented intelligent extraction logic to isolate approved SEP numbers, handle delimiter conversions, and output structured CSV/SQL-ready datasets.
- Deployed to production, significantly accelerating financial processing speed and eliminating critical bottlenecks for the admin team.

RME Auto Form System

2025

Full-Stack Web Developer

Python · Streamlit · Document Generation APIs

- Built an internal web utility enabling automated Electronic Medical Record (RME) form aggregation filtered by medical room and date matrix.
- Programmed server-side document generation engines outputting signed digital archives, fully replacing manual cross-department workflows.

Enterprise Attendance & Payroll System

2024

Backend Engineer

PHP Laravel · MySQL · FPDF

- Engineered a web app with multi-shift workforce management logic, relational DB schemas, automated salary computation, and PDF payslip generation.

PROFESSIONAL EXPERIENCE

IT Support & Systems Engineering Assistant

Mar 2022 – Present

RSUD Kota Cilegon

Cilegon, Indonesia

- Maintained database health, data backup, and system reliability for healthcare software serving 200+ users.
- Built standalone automation utilities (Python + Tkinter) to optimize daily engineering queues and system workflows.

TECHNICAL SKILLS

Languages: Python (Advanced), PHP (Native & MVC), SQL (MySQL), Bash

Frameworks & Tools: Laravel, CodeIgniter, Streamlit, Tkinter, Git, GitHub, WordPress

Database & Infra: MySQL, Schema Optimization, SQL Query Tuning, Linux (Ubuntu), LAN/WAN

CERTIFICATIONS & EDUCATION

- Python & Linux Fundamentals – Aguna Course (Dec 2025) | Responsive Web Design – freeCodeCamp
- Google IT Support Professional Certificate – Coursera | Cisco Networking Basics – Cisco

Universitas Serang Raya – S.Kom in Information Systems

2015 – 2020
